List of Tables

Table 2-1 Function pin assignment	6
Table 6-1 Revision history	56

1. Summary

GD32470i-EVAL uses GD32F470IKH6 as the main controller. It uses Mini USB interface or DC-005 connector to supply 5V power. SWD, Reset, Boot, User button key, LED, CAN, I2C, I2S, USART, RTC, LCD, SPI, ADC, DAC, EXMC, CTC, SDIO, DCI, ENET, USBFS, USBHS, GD-Link and Extension Pins are also included. For more details please refer to GD32470i-EVAL-V1.0 schematic.

2. Function pin assignment

Table 2-1 Function pin assignment

Function	Pin	Description
LED	PE2	LED1
	PE3	LED2
	PF10	LED3
RESET		K1-Reset
KEY	PA0	K2-Wakeup
	PC13	K3-Tamper
	PB14	K4-User key
USART0	PA9	USART0_TX

	PA3	USB_HS_ULPI_D0

3. Getting started

The EVAL board uses Mini USB connector or DC-005 connector to get power DC +5V, which is the hardware system normal work voltage. Three kinds of different USB power supply which are USB_FS, USB_HS_ULPI, GD-Link can be chosen through JP4. A J-Link tool or GD-Link on board is necessary in order to download and debug programs. Select the correct boot mode and then power on, the LED5 will turn on, which indicates that the power supply is OK.

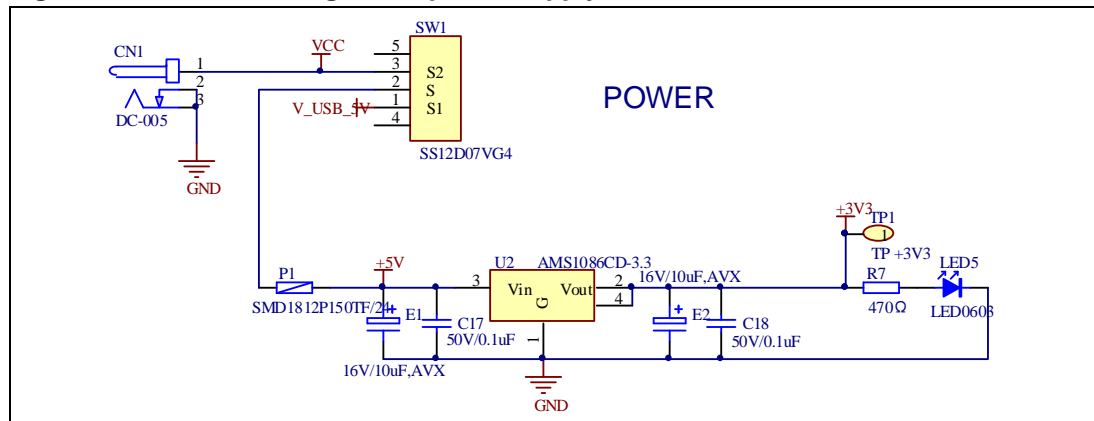

There are Keil version and IAR version of all projects. Keil version of the projects are created based on Keil MDK-ARM 4.74 uVision4. IAR version of the projects are created based on IAR Embedded Workbench for ARM 7.40.2. In Firmware folder, Addon and Software Pack are used to add the devices, peripherals and others to IDE. During use, the following points should be noted:

1. If you use Keil uVision4 to open the project, install the GD32F4xx_Addon.3.0.0.exe which is in \Library\Firmware to load the associated files.
2. If you use Keil uVision5 to open the project, there are two ways to solve the "Device Missing (s)" problem. One is to install GigaDevice.GD32F4xx_DFP.3.0.0.pack which is in \Library\Firmware. In Project menu, select the Manage sub menu, click on the "Version Migrate 5 Format..." menu, the Keil uVision4 project will be converted to Keil uVision5 project. Then add "C:\Keil_v5\ARM\Pack\ARM\CMSIS\4.2.0\CMSIS\Include" to C/C++ in Option for Target. The other is to install Addon directly. Select the installation directory of Keil uVision5 software, such as C:\Keil_v5, in Destination Folder of Folder Selection. Select the corresponding device in Device of Option for Target and add "C:\Keil_v5\ARM\Pack\ARM\CMSIS\4.2.0\CMSIS\Include" to C/C++ in Option for Target.
3. If you use IAR to open the project, install IAR_GD32F4xx_ADDON.3.0.0.exe which is in \Library\Firmware to load the associated files.

5. Routine use guide

5.1. GPIO_Running_LED

5.1.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED.
- Learn to use SysTick to generate 1ms delay.

GD32470i-EVAL-V1.0 board has three LEDs. The LED1, LED2 and LED3 are controlled by GPIO. This demo will show how to light the LEDs.

5.1.2. DEMO running result

Download the program <01_GPIO_Running_LED> to the EVAL board, LED1, LED2 and LED3 will turn on in sequence with interval of 1000ms, and repeat the process.

5.2. GPIO_Key_Polling_mode

5.2.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED and the Key.
- Learn to use SysTick to generate 1ms delay.

GD32470i-EVAL-V1.0 board has four keys and three LEDs. The four keys are Reset key, Tamper key, Wakeup key and User key. The LED1, LED2 and LED3 are controlled by GPIO.

This demo will show how to use the Tamper key to control the LED2. When press down the Tamper Key, it will check the input value of the IO port. If the value is 0 and will wait for 100ms. Check the input value of the IO port again. If the value still is 0, it indicates that the button is pressed successfully and toggle LED2.

5.2.2. DEMO running result

Download the program <02_GPIO_Key_Polling_mode> to the EVAL board, Press down the Tamper Key, LED2 will be turned on. Press down the Tamper Key again, LED2 will be turned off.

5.3. EXTI_Key_Interrupt_mode

5.3.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED and the KEY.
- Learn to use EXTI to generate external interrupt.

GD32470I-EVAL-V1.0 board has four keys and three LEDs. The four keys are Reset key, Tamper key, Wakeup key and User key. The LED1, LED2 and LED3 are controlled by GPIO.

This demo will show how to use the EXTI interrupt line to control the LED2. When press down the Tamper Key, it will produce an interrupt. In the interrupt service function, the demo will toggle LED2.

5.3.2. DEMO running result

Download the program <03_EXTI_Key_Interrupt_mode> to the EVAL board, LED2 is turned on and off for test. Press down the Tamper Key, LED2 will be turned on. Press down the Tamper Key again, LED2 will be turned off.

5.4. USART_Printf

5.4.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED
- Learn to retarget the C library printf function to the USART

5.4.2. DEMO running result

Download the program < 04_USART_Printf > to the EVAL board, connect serial cable to COM0 and jump JP5 to USART. This implementation outputs "USART printf example: please press the Tamper key" on the HyperTerminal using COM0. Press the Tamper key, the LED3 will be turned on and serial port will output "USART printf example".

The output information via the serial port is as following.

```
USART printf example: please press the Tamper key
USART printf example
```

5.5. USART_Echo_Interrupt_mode

5.5.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the USART transmit and receive interrupts to communicate with the serial terminal tool.

5.5.2. DEMO running result

Download the program < 05_USART_Echo_Interrupt_mode > to the EVAL board, connect serial cable to COM0 and jump JP5 to USART. Firstly, all the LEDs are turned on and off for test. Then, the COM0 sends the tx_buffer array (from 0x00 to 0xFF) to the serial terminal tool supporting hex format communication and waits for receiving data of BUFFER_SIZE bytes from the serial terminal. The data MCU has received is stored in the rx_buffer array. After that, compare tx_buffer with rx_buffer. If tx_buffer is same with rx_buffer, LED1, LED2, LED3 flash by turns. Otherwise, LED1, LED2, LED3 toggle together.

The output information via the serial port is as following.

```
00 01 02 03 04 05 06 07 08 09 0A 0B 0C 0D 0E 0F 10 11 12 13 14 15 16 17 18 19 1A 1B

```

5.6. USART_DMA

5.6.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the USART transmit and receive data using DMA.

5.6.2. DEMO running result

Download the program < 06_USART_DMA > to the EVAL board, connect serial cable to COM0 and jump JP5 to USART. Firstly, all the LEDs are turned on and off for test. Then, the COM0 sends the tx_buffer array (from 0x00 to 0xFF) to the serial terminal tool supporting hex format communication and waits for receiving data of same bytes as tx_buffer from the serial terminal. The data MCU have received is stored in the rx_buffer array. After that, compare tx_buffer with rx_buffer. If tx_buffer is same with rx_buffer,

LED1, LED2, LED3 flash by turns. Otherwise, LED1, LED2, LED3 toggle together.

5.7. ADC_Temperature_Vrefint

5.7.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to get the value of inner channel 16(temperature sensor channel), channel 17 (VREFINT channel) and channel 18(VBAT/4 channel)

5.7.2. DEMO running result

Jump the JP5 to USART with the jumper cap, and then download the program <07_ADC_Temperature_Vrefint_Vbat> to the board. Connect serial cable to COM0, open the HyperTerminal.

When the program is running, HyperTerminal display the value of temperature, internal voltage reference (VREFINT) and external battery voltage VBAT.

Notice: because there is an offset, when inner temperature sensor is used to detect accurate temperature, an external temperature sensor part should be used to calibrate the offset error.

```
the temperature data is 24 degrees Celsius

5.8. ADC0_ADC1_Follow_up_mode

5.8.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to use ADC0 and ADC1 follow-up mode

5.8.2. DEMO running result

Jump the JP5 to USART with the jumper cap, and then download the program <08_ADC0_ADC1_Follow_up_mode> to the board. Connect serial cable to COM0, open the HyperTerminal. PC5 pin connect to the external voltage input. PC3 is the output voltage of the slide rheostat VR1 on board. Keep PC5 pin should not be reused by other peripherals. JP17 should not be connected.

TIMER1_CH1 is the trigger source of ADC0 and ADC1. When the rising edge of TIMER1_CH1 coming, ADC0 starts immediately and ADC1 starts after a delay of several ADC clock cycles. The values of ADC0 and ADC1 are transmitted to array `adc_value[0]` and `adc_value [1]` by DMA.

When sampling the first channel of ADCx (x=0,1), the value of the ADC0 conversion of PC3 pin is stored into the low half word of `adc_value [0]`, and after a delay of several ADC clock cycles the value of the ADC1 conversion of PC5 pin is stored into the high half word of `adc_value [0]`. When sampling the second channel of ADCx (x=0,1), the value of the ADC0 conversion of PC5 pin is stored into the low half word of `adc_value [1]`, and after a delay of several ADC clock cycles the value of the ADC1 conversion of PC3 pin is stored into the high half word of `adc_value [1]`.

When the program is running, HyperTerminal display the regular value of ADC0 and ADC1 by `adc_value [0]` and `adc_value [1]`.

```

the data adc_value[0] is 00DE0FF3
the data adc_value[1] is 0FFF00A3

the data adc_value[0] is 00E30FFE
the data adc_value[1] is 0FFF00A4

the data adc_value[0] is 00EA0FF9
the data adc_value[1] is 0FF400B2

the data adc_value[0] is 00DE0FFF
the data adc_value[1] is 0FFE00A9

the data adc_value[0] is 00E00FF1
the data adc_value[1] is 0FF500A6

```

5.9. ADC0_ADC1_Regular_Parallel_mode

5.9.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the ADC to convert analog signal to digital data
- Learn to use ADC0 and ADC1 regular parallel mode

5.9.2. DEMO running result

Jump the JP5 to USART with the jumper cap, and then download the program <09_ADC0_ADC1_Regular_Parallel_mode> to the board. Connect serial cable to COM0, open the HyperTerminal. PC5 pin connect to the external voltage input. PC3 is the output voltage of the slide rheostat VR1 on board. Keep PC5 pin should not be reused by other peripherals. JP17 should not be connected.

TIMER1_CH1 is the trigger source of ADC0 and ADC1. When the rising edge of TIMER1_CH1 coming, ADC0 and ADC1 convert the regular channel group parallelly. The values of ADC0 and ADC1 are transmitted to array `adc_value[0]` and `adc_value [1]` by DMA.

When sampling the first channel of ADCx (x=0,1), the value of the ADC0 conversion of PC3 pin is stored into the low half word of `adc_value [0]`, the value of the ADC1 conversion of PC5 pin is stored into the high half word of `adc_value [0]`. When sampling the second channel of ADCx (x=0,1), the value of the ADC0 conversion of PC5 pin is stored into the low half word of `adc_value [1]`, the value of the ADC1 conversion of PC3 pin is stored into the high half word of `adc_value [1]`.

When the program is running, HyperTerminal displays the regular value of ADC0 and ADC1 stored in `adc_value[0]` and `adc_value[1]`.

```
the data adc_value[0] is 06210000
the data adc_value[1] is 00000627

the data adc_value[0] is 06290B29
the data adc_value[1] is 0B40061F

the data adc_value[0] is 06250B49
the data adc_value[1] is 0B590629

the data adc_value[0] is 06280B3F
the data adc_value[1] is 0B320628

the data adc_value[0] is 06230B30
the data adc_value[1] is 0B430622
```

5.10. DAC_Output_Voltage_Value

5.10.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use DAC to output voltage on DAC0 output

5.10.2. DEMO running result

Download the program <10_DAC_Output_Voltage_Value> to the EVAL board and run, all the LEDs will turn on and turn off for test. The digital value is 0x7FF0, its converted analog voltage should be 1.65V (VREF/2), using the voltmeter to measure PA4 or DAC_OUT0 on JP7, its value is 1.65V. And the signal can be observed through the oscilloscope.

5.11. I2C_EEPROM

5.11.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the master transmitting mode of I2C module;
- Learn to use the master receiving mode of I2C module;
- Learn to read and write the EEPROM with I2C interface.

5.11.2. DEMO running result

Download the program <11_I2C_EEPROM> to the EVAL board and run. Connect serial cable to COM0, jump JP5 to USART, then open the HyperTerminal to show the print message.

Firstly, the data of 256 bytes will be written to the EEPROM from the address 0x00 and printed by the serial port. Then, reading the EEPROM from address 0x00 for 256 bytes and the result will be printed. Finally, compare the data that were written to the EEPROM and the data that were read from the EEPROM. If they are the same, the serial port will output "I2C-AT24C02 test passed!" and the four LEDs lights flashing, otherwise the serial port will output "Err: data read and write aren't matching." And all the four LEDs light.

The output information via the serial port is as following.

```
GD32470I-EVAL I2C-24C02 configured...
The I2C0 is hardware interface
The speed is 400000

5.12. SPI_QSPI_Flash

5.12.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the Quad-SPI mode of SPI unit to read and write NOR Flash with the SPI

interface

GD32470I-EVAL-V1.0 board integrates SPI5 module with Quad-SPI mode and the mode can communicate with external NOR Flash devices. The SPI NOR FLASH is a serial FLASH memory chip GD25Q16B which size is 16Mbit, the chip supports standard SPI and quad SPI operation instructions.

5.12.2. DEMO running result

The computer serial port line connected to the COM0 port of development board, set the baud rate of HyperTerminal software to 115200, 8 bits data bit, 1 bit stop bit. At the same time you should jump the JP5 to USART, and jump the JP12, JP13, JP20 to SPI.

Download the program <12_SPI_QSPI_Flash> to the EVAL board, the HyperTerminal software can observe the operation condition and will display the ID of the flash, 256 bytes data which are written to and read from flash. Compare the data that were written to the flash and the data that were read from the flash. If they are the same, the serial port will output "SPI-GD25Q16 Test Passed!", otherwise, the serial port will output "Err: Data Read and Write aren't Matching.". At last, turn on and off the leds one by one. The following is the experimental results.

```

5.13. I2S_Audio_Player

5.13.1. DEMO purpose

This Demo includes the following functions of GD32 MCU:

- Learn to use I2S module to output audio file
- Parsing audio files of wav format

GD32470I-EVAL-V1.0 board integrates the I2S(Inter-IC Sound) module, and the module can communicate with external devices using the I2S audio protocol. This Demo mainly shows

how to use the I2S interface of the board for audio output.

5.13.2. DEMO running result

Download the program<13_I2S_Audio_Player>to the EVAL board, jump the JP18 to I2S with the jumper cap, insert the headphone into the audio port, and then listen to the audio file.

5.14. EXMC_SDRAM

5.14.1. DEMO purpose

This demo includes the following function of GD32 MCU:

- Learn to use EXMC control the SDRAM.

5.14.2. DEMO running result

GD32470I-EVAL board has EXMC module to control SDRAM. Before running the demo, JP17 must be fitted to SDRAM, JP5 must be fitted to USART. Download the program <14_EXMC_SDRAM> to the EVAL board. This demo shows the write and read operation process of SDRAM memory by EXMC module. If the test succeed, LED1 will be turned on. Otherwise, turn on the LED3. Information via a HyperTerminal output as following:

```

SDRAM initialized!
SDRAM write data completed!
SDRAM read data completed!
Check the data!
SDRAM test succeeded!
The data is:
0 1 2 3 4 5 6 7 8 9 a b c d e f
10 11 12 13 14 15 16 17 18 19 1a 1b 1c 1d 1e 1f

5.15. EXMC_SDRAM_DeepSleep

5.15.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use EXMC control the SDRAM;

-
- Learn to use deepsleep mode.

5.15.2. DEMO running result

GD32470I-EVAL board has EXMC module to control SDRAM. Before running the demo, JP17 must be fitted to SDRAM, JP5 must be fitted to USART. Download the program <15_EXMC_SDRAM_DeepSleep> to the EVAL board. This demo shows how to use SDRAM in the deepsleep mode. Firstly, MCU works in the normal mode, SDRAM auto-refresh cycles are performed by MCU, we write the specified data to the SDRAM. Secondly, we make the MCU to deepsleep mode, at the time, SDRAM auto-refresh cycles are performed by itself and LED2 will light on. Thirdly, press the user key to wake up MCU, compare the data which read from SDRAM with the write data, if the test pass, LED1 will be turned on. Otherwise, turn on the LED3. Information via a HyperTerminal output as following:

```

SDRAM initialized!
SDRAM write data completed!
Enter deepsleep mode!
Press the user key to wakeup the MCU!

User key has been pressed!
SDRAM read data completed!
Check the data!
SDRAM test succeeded!
The data is:
  0   1   2   3   4   5   6   7   8   9   a   b   c   d   e   f

5.16. EXMC_NandFlash

5.16.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use EXMC control the NAND flash.

5.16.2. DEMO running result

GD32470I-EVAL board has EXMC module to control NAND flash. Before running the demo, JP5 must be fitted to USART. Download the program <16_EXMC_NandFlash> to the EVAL board. This demo shows the write and read operation process of NAND flash memory by EXMC module. If the test pass, LED1 will be turned on. Otherwise, turn on the LED3. Information via a HyperTerminal output as following:

```
NAND flash initialized!
Read NAND ID!
Nand flash ID:0xC8 0xF1 0x80 0x1D

Write data successfully!
Read data successfully!
Check the data!
Access NAND flash successfully!
The data to be read:
  0   1   2   3   4   5   6   7   8   9   a   b   c   d   e   f

5.17. SDIO_SDCardTest

5.17.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use SDIO to single block or multiple block write and read
- Learn to use SDIO to erase, lock and unlock a SD card

GD32470i-EVAL-V1.0 board has a secure digital input/output interface (SDIO) which defines the SD/SD I/O /MMC CE-ATA card host interface. This demo will show how to use SDIO to operate on SD card.

5.17.2. DEMO running result

Jump the JP5 to USART to show the print message through HyperTerminal, and jump the JP15 to LED3 to show the execution state of program. Download the program <17_SDIO_SDCardTest> to the EVAL board and run. Connect serial cable to COM0, open the HyperTerminal. Firstly, all the LEDs are turned on and off for test. Then initialize the card and print out the information of the card. After that, test the function of single block operation, lock and unlock operation, erase operation and multiple blocks operation. If any error occurs, print the error message and turn on LED1, LED3 and turn off LED2. Otherwise, turn on all the LEDs.

Uncomment the macro DATA_PRINT to print out the data and display them through HyperTerminal. Set bus mode(1-bit or 4-bit) and data transfer mode(polling mode or DMA mode) by comment and uncomment the related statements.

Information via a serial port output as following.

```
Card init success!

Card information:
## Card version 3.0x ##
## SDHC card ##
## Device size is 7782400KB ##
## Block size is 512B ##
## Block count is 15584800 ##
## CardCommandClasses is: 5b5 ##
## Block operation supported ##
## Erase supported ##
## Lock unlock supported ##
## Application specific supported ##
## Switch function supported ##

Card test:
Block write success!
Block read success!
The card is locked!
Erase failed!
The card is unlocked!
Erase success!
Block read success!
Multiple block write success!
Multiple block read success!
```

5.18. CAN_Network

5.18.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the CAN0 communication between two boards

GD32470I-EVAL board integrates CAN (controller area network) bus controller. It is a common industrial control bus. The CAN bus controller follows the 2.0A and 2.0B bus protocols. This routine demonstrates the communication between two boards through

CAN0.

5.18.2. DEMO running result

This example is tested with two GD32F470I-EVAL boards. Jump the JP5 to USART and JP19, JP21 to CAN with the jumper cap. Connect L pin to L pin and H pin to H pin of JP14 on the boards for sending and receiving frames. Download the program <18_CAN_Network> to the two EVAL boards, and connect serial cable to COM0. Firstly, the COM0 sends “please press the Tamper key to transmit data!” to the HyperTerminal. The frames are sent and the transmit data are printed by pressing Tamper Key push button. When the frames are received, the receive data will be printed and the LED2 will toggle one time.

The output information via the serial port is as following.

```
please press the Tamper key to transmit data!  
CAN0 transmit data: ab,cd  
CAN0 receive data: ab,cd
```

5.19. RCU_Clock_Out

5.19.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use GPIO control the LED.
- Learn to use the clock output function of RCU.
- Learn to communicate with PC by USART.

5.19.2. DEMO running result

Jump the JP5 to USART with the jumper cap, and download the program <19_RCU_Clock_Out> to the EVAL board and run. Connect serial cable to COM0, open the HyperTerminal. When the program is running, HyperTerminal will display the initial information. Then user can choose the type of the output clock by pressing the TAMPER button. After pressing, the corresponding LED will be turned on and HyperTerminal will display which mode be selected. The frequency of the output clock can be observed through the oscilloscope by PA8 and PC9 pin.

Information via a serial port output as following:

```
/===== Gigadevice clock output Demo =====/  
press tamper key to select clock output source  
CK_OUT0: IRC16M, CK_OUT1: system clock/5  
CK_OUT0: LXTAL, CK_OUT1: PLLI2SR/5
```

5.20. CTC_Calibration

5.20.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use external low speed crystal oscillator (LXTAL) to implement the CTC calibration function.
- Learn to use clock trim controller (CTC) to trim internal 48MHz RC oscillator (IRC48M) clock.

The CTC unit trim the frequency of the IRC48M based on an external accurate reference signal source. It can automatically adjust the trim value to provide a precise IRC48M clock.

5.20.2. DEMO running result

Download the program <20_CTC_Calibration > to the GD32470i-EVAL-V1.0 board and run. The LED1 will turn on if the internal 48MHz RC oscillator (IRC48M) clock trim is OK.

5.21. PMU_Sleep_Wakeup

5.21.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the USART receive interrupt to wake up the PMU from sleep mode

5.21.2. DEMO running result

Download the program < 21_PMU_Sleep_Wakeup > to the EVAL board, jump the JP5 to USART with the jumper cap and connect serial cable to COM0. After power-on, all the LEDs are off. The mcu will enter sleep mode and the software stop running. When the USART0 receives a byte of data from the HyperTerminal, the mcu will wake up from a receive interrupt. And all the LEDs will flash together.

5.22. RTC_Calendar

5.22.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use RTC module to implement calendar function
- Learn to use USART module to implement time display

5.22.2. DEMO running result

Jump the JP5 to USART with the jumper cap, and download the program <22_RTC_Calendar> to the EVAL board and run. Connect serial cable to COM0, open the HyperTerminal. After start-up, the program will ask to set the time on the HyperTerminal. The calendar will be displayed on the HyperTerminal.

```
***** RTC calendar demo *****  
  
=====Configure RTC Time=====  
  
please input hour:  
  
12  
  
please input minute:  
  
12  
|  
please input second:  
  
12  
  
** RTC time configuration success! **  
  
Current time: 12:12:12
```

5.23. TIMER_Breath_LED

5.23.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use Timer output PWM wave
- Learn to update channel value

5.23.2. DEMO running result

Use the DuPont line to connect the TIMER1_CH2 (PB10) and LED1 (PE2), and then

download the program <23_TIMER_Breath_LED> to the board and run. When the program is running, you can see LED1 lighting from dark to bright gradually and then gradually darken, just like breathing as rhythm.

5.24. TLI_IPA

5.24.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use TLI to control LCD for displaying different images
- Learn to use IPA to process image data

5.24.2. DEMO running result

Jump the JP12, JP15 to LCD, and download the program <24_TLI_IPA> to the EVAL board and run. After downloading program to board, a running cheetah on the background of GD logo is appeared on the LCD, which outputs as following. DC-5V power supply is recommended due to the large current consumption caused by LCD screen.

5.25. DCI_OV2640

5.25.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use DCI interface capture image from OV2640 camera
- Learn to use TLI interface display the captured image

5.25.2. DEMO running result

Connect jumper JP19,JP21,JP22,JP23 to DCI, jumper JP12 , JP15 to LCD, jumper JP17 to SDRAM. Download the program<25_DCI_OV2640>to the GD32470i-EVAL-V1.0 board, the correct installation of LCD display and OV2640 camera to the development board. After power on, you can observe the capture image of camera displayed on the LCD screen, you can press the user key to take photo and press tamper key to display photo. You can also return to the camera capture state when press the wakeup key on the development board.

5.26. TRNG_Get_Random

5.26.1. DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use TRNG generate the random number.
- Learn to communicate with PC by USART.

5.26.2. DEMO running result

Jump the JP5 to USART with the jumper cap, and download the program <26_TRNG_Get_Random> to the EVAL board and run. Connect serial cable to COM0, open the serial terminal tool supporting hex format communication. When the program is running, the serial terminal tool will display the initial information. User can use the serial terminal tool to input the minimum and maximum values (for example, the minimum value is 0x00, the maximum value is 0x09), then application will generate random number in the input range and display it by the serial terminal tool.

Information via a serial port output as following:

```

/=====Gigadevice TRNG test=====/
TRNG init ok
Please input min num (hex format):
Please input max num (hex format):
Input min num is 0
Input max num is 9
Generate random num1 is 9
Generate random num2 is 8
Please input min num (hex format):

```

5.27. ENET

5.27.1. FreeRTOS_tcpudp

DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use Lwip stack.
- Learn to use FreeRTOS operation system.
- Learn to use netconn and socket API to handle with a task.
- Learn how to realize a tcp server.
- Learn how to realize a tcp client.
- Learn how to realize a udp server/client.
- Learn how to use DHCP to allocate ip address automatically.

This demo is based on the GD32470i-EVAL-V1.0 board, it shows how to configure the enet peripherals to send and receive frames in normal mode and use lwip tcp / ip stack to realize ping, telnet and server/client functions.

JP12, JP13, JP17, JP18, JP20, JP22 must be fitted. JP5 jump to Usart.

It is configured in RMII mode, and 25MHz oscillator is used, the system clock is configured to 200MHz.

This demo realizes three applications:

- Telnet application, the eval board acts as tcp server. Users can link the client with

the eval board server, using 8000 port. Users can see the reply from the server, and can send the name(should input enter key) to server.

- tcp client application, the eval board acts as tcp client. Users can link the eval board client with the server, using 10260 port. Users can send information from server to client, then the client will send back the information.
- udp application. Users can link the eval board with another station, using 1025 port. Users can send information from station to board, then the board will send back the information.

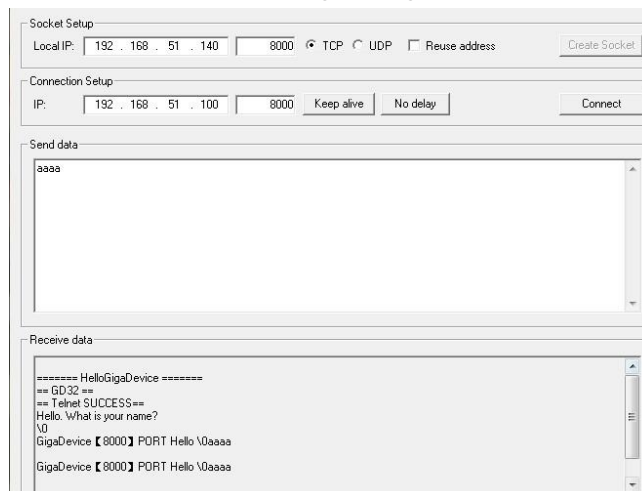

If users need dhcp function, it can be configured from the private defines in main.h. This function is closed by default.

Note: Users should configure ip address, mask and gw of GD32470i-EVAL-V1.0 board or served according to the actual net situation from the private defines in main.h.

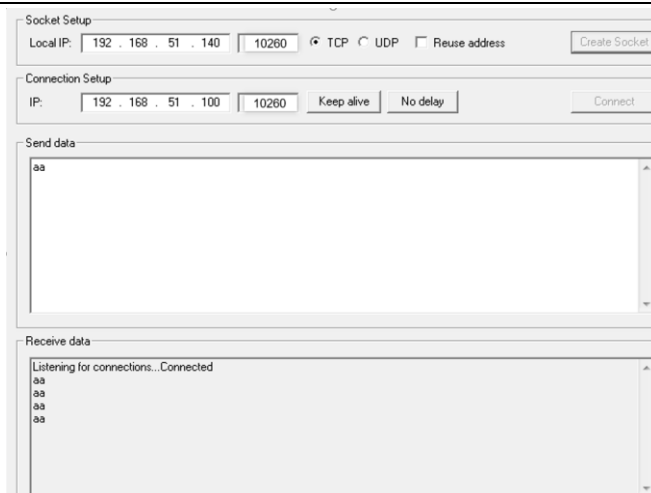

DEMO running result

Download the program <FreeRTOS_tcpudp> to the EVAL board, LED3 will light every 500ms.

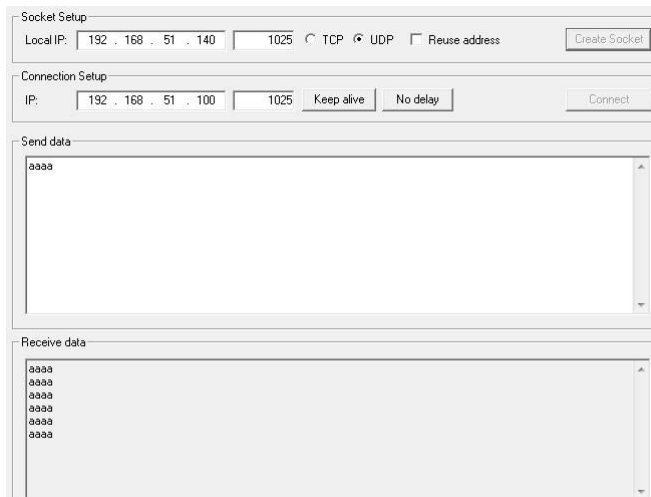

Using Network assistant software, configure the pc side to tcp client, using 8000 port, and when send something through the assistant, users can see the reply from the server:

Using Network assistant software, configure the pc side to tcp server, using 10260 port, and when send something through the assistant, users can see the echo reply from the client:

Using Network assistant software, configure to use udp protocol, using 1025 port, and when send something through the assistant, users can see the echo reply from the board:

Open the DHCP function in main.h, using a router to connect the board with the pc, users can see the automatic allocated ip address of the board from the HyperTerminal.

5.27.2. Raw_tcpudp

DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use Lwip stack.
- Learn to use raw API to handle with a task.
- Learn how to realize a tcp server.
- Learn how to realize a tcp client.
- Learn how to realize a udp server / client.
- Learn how to use DHCP to allocate ip address automatically.
- Learn to handle with received packet in polling mode and in interrupt mode.

This demo is based on the GD32470i-EVAL-V1.0 board, it shows how to configure the enet peripherals to send and receive frames in normal mode and use lwip tcp / ip stack to realize ping, telnet and server/client functions.

JP12, JP13, JP17, JP18, JP20, JP22 must be fitted. JP5 jump to Usart.

It is configured in RMII mode, and 25MHz oscillator is used, the system clock is configured to 200MHz.

This demo realizes three applications:

- Telnet application, the eval board acts as tcp server. Users can link the client with the eval board server, using 8000 port. Users can see the reply from the server, and can send the name(should input enter key) to server.
- tcp client application, the eval board acts as tcp client. Users can link the eval board client with the server, using 10260 port. Users can send information from server to client, then the client will send back the information. If the server is not online at first, or is break during process, when the server is ready again, users can press tamper key to reconnect with server, and communicate.
- udp application. Users can link the eval board with another station, using 1025 port.
- Users can send information from station to board, then the board will send back the information.

By default, the packet reception is polled in while(1). If users want to receive packet in interrupt service, uncomment the macro defined USE_ENET_INTERRUPT in main.h. If users need dhcp function, it can be configured from the private defines in main.h. This function is closed in default.

Note: Users should configure ip address, mask and gw of GD32470i-EVAL-V1.0 board, or server according to the actual net situation from the private defines in main.h.

DEMO running result

Download the program <Raw_tcpudp> to the EVAL board.

Using Network assistant software, configure the pc side to tcp client, using 8000 port, and when send something through the assistant, users can see the reply from the server:

Socket Setup
Local IP: 192 . 168 . 51 . 140 8000 ☒ TCP ☐ UDP ☐ Reuse address

Connection Setup
IP: 192 . 168 . 51 . 100 8000

Send data
aaaa

Receive data
Telnet:192.168.51.140
Welcome GigaDevice #####

Open the DHCP function in main.h, using a router to connect the board with the pc, users can see the automatic allocated ip address of the board from the HyperTerminal.

5.27.3. Raw_webserver

DEMO purpose

This demo includes the following functions of GD32 MCU:

- Learn to use Lwip stack.
- Learn to use raw API to handle with a task.
- Learn how to realize a web server.
- Learn how to use a web server to control LEDs.
- Learn how to use a web server to monitor the board V_{REFINT} voltage.
- Learn how to use DHCP to allocate ip address automatically.
- Learn to handle with received packet in polling mode and in interrupt mode.

This demo is based on the GD32470i-EVAL-V1.0 board, it shows how to configure the enet peripherals to send and receive frames in normal mode and use lwip tcp / ip stack to realize webserver application.

JP12, JP13, JP17, JP18, JP20, JP22 must be fitted. JP5 jump to Usart.

It is configured in RMII mode, and 25MHz oscillator is used, the system clock is configured to 200MHz.

This demo realizes webserver application:

Users can visit the eval board through Internet Explorer, the eval board acts as a webserver, and the url is the local ip address of the eval board. There are two experiments realized, one is the LEDs control, the other one is the ADC monitoring V_{REFINT} voltage in real-time.

If users need dhcp function, it can be configured from the private defines in main.h. This function is closed by default. Users can use a router to connect the eval board, and use the COM port to print the automatic allocated ip address, then connect your mobile phone to the wifi which the router send. Users can visit the eval board and control it on your mobile phone.

By default, the packet reception is polled in while(1). If users want to receive packet in interrupt service, uncomment the macro define USE_ENET_INTERRUPT in main.h.

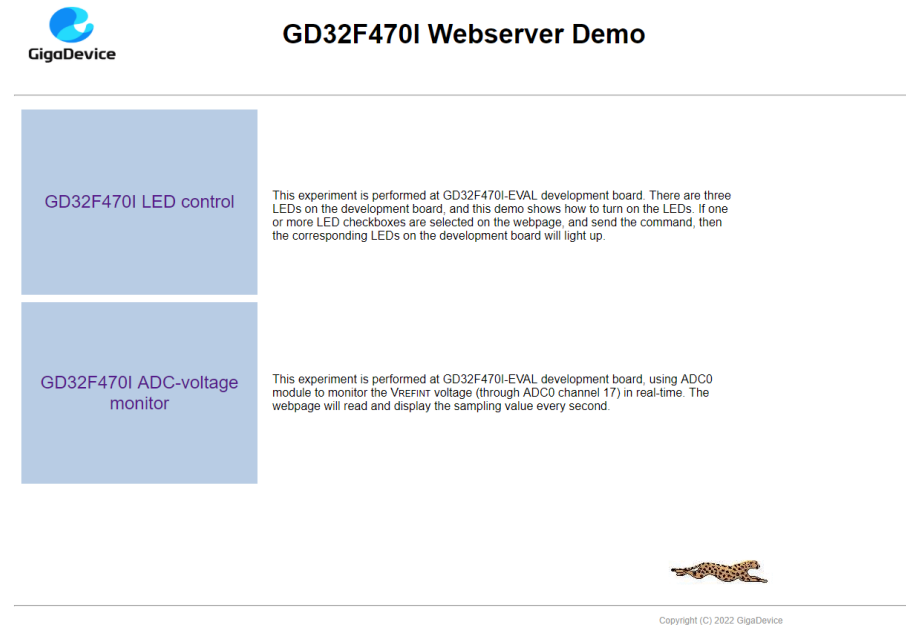

Note: Users should configure ip address, mask and gw of GD32470i-EVAL-V1.0 board according to the actual net situation from the private defines in main.h.

DEMO running result

Download the program <Raw_webserver> to the EVAL board, using Internet Explorer software, enter in the ip address of the board, click on the LED control linker, choose the

LED checkboxes users want to light, and “send”, the corresponding LEDs will light. Click on the ADC monitor linker, the real-time V_{REFINT} voltage is showed on the webpage, and the data refreshes every second automatically.

The web home page shows as below:

The LED control page shows as below:

The ADC monitor page shows as below:

GD32F470I ADC-voltage monitor

Open the DHCP function in main.h, using a router to connect the board, and use the HyperTerminal to print the automatic allocated ip address, then connect your mobile phone to the wifi which the router send. Users can visit the eval board and control it on your mobile phone.

5.28. USB_Device

5.28.1. HID_Keyboard

DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn how to use the USBFS/USBHS peripheral mode
- Learn how to implement USB HID (human interface) device

GD32F470I-EVAL board has four keys, one USB_FS interface and one USB_HS interface. The four keys are Reset key, Wakeup key, User key and Tamper key. In this demo, the GD32F470I-EVAL board is enumerated as an USB Keyboard, which uses the native PC Host HID driver, as shown below. The USB Keyboard uses three keys (wakeup key, tamper key and user key) to output three characters ('b', 'a' and 'c'). In addition, the demo also supports remote wakeup which is the ability of a USB device to bring a suspended bus back to the active condition, and the wakeup key is used as the remote wakeup source.

DEMO Running Result

According to the VBUSIG bit in USBFS_GCCFG register, user can decide whether or not to jump JP5 to USB_FS. After doing this, download the program <28_USB_Device\HID_Keyboard> to the EVAL board and run. If you press the Wakeup key, will output 'b'. If you press the User key, will output 'c'. If you press the Tamper key, will output 'a'.

If you want to test USB remote wakeup function, you can do as follows:

- Manually switch PC to standby mode
- Wait for PC to fully enter the standby mode
- Push the Wakeup key
- If PC is ON, remote wakeup is OK, else failed.

5.28.2. MSC_Udisk

DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn how to use the USBFS/USBHS peripheral mode
- Learn how to implement USB MSC(mass storage) device

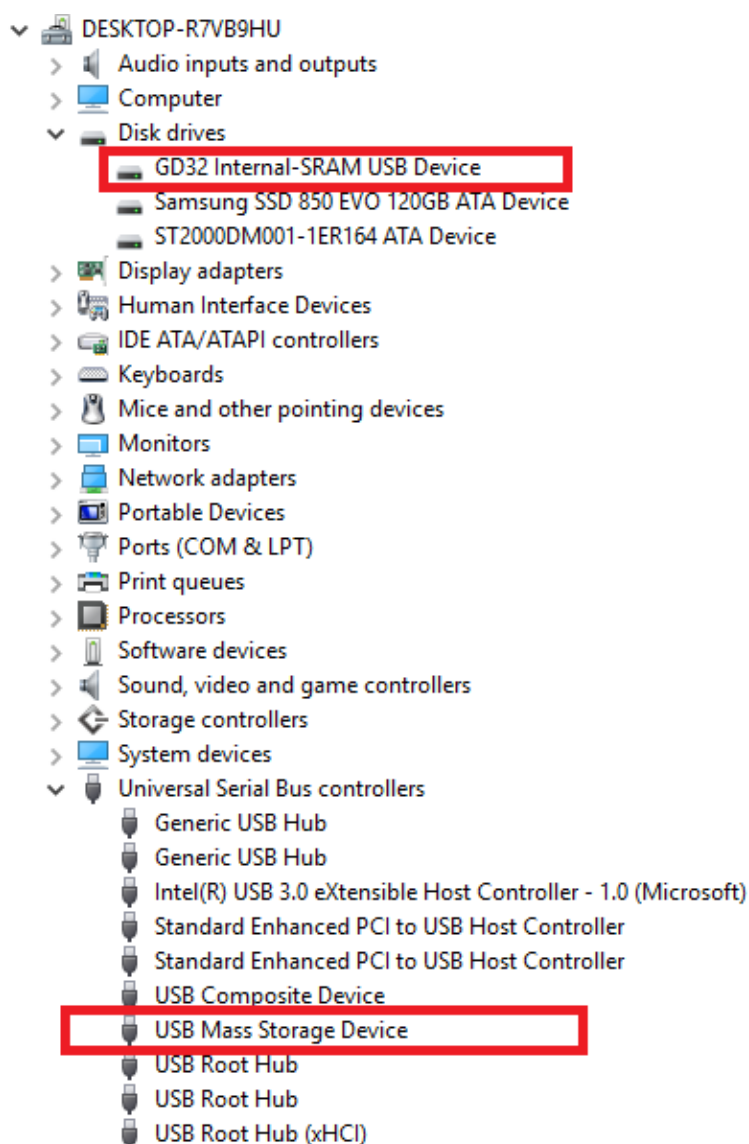

This demo mainly implements a U disk. U disk is currently very widely used removable MSC devices. MSC, the Mass Storage device Class, is a transport protocol between a computer and mobile devices, which allow a universal serial bus (USB) equipment to access a host computing device, file transfer between them, mainly including mobile hard disk, mobile U disk drive, etc... The MSC device must have a storage medium, and this Demo uses the MCU's internal SRAM as the storage medium. For more details of the MSC protocol please refer to the MSC protocol standard.

MSC device will use a variety of transport protocols and command formats for communication, so it need to choose the appropriate protocol and command format in the realization of the application. This Demo selects the BOT (bulk only transport) protocol and the required SCSI (small computer interface) command, and is compatible

with a wide variety of Window operating systems. Specific BOT protocol and SCSI command specification please refer to the standard of their agreement.

DEMO Running Result

According to the VBUSIG bit in USBFS_GCCFG register, user can decide whether or not to jump JP5 to USB_FS if user use USBFS core. After doing this, download the program <28_USB_Device\MSC_Udisk> to the EVAL board and run. When the EVAL board connect to the PC, you will find a USB large capacity storage device is in the universal serial bus controller, and there is 1 more disk drives in the equipment manager of PC, as shown below:

Then, after opening the resource manager, you will see more of the 1 disk, as shown in the following diagram:

有可移动存储的设备 (2)

At this point, the write/read/formatting operation can be performed as the other mobile devices.

5.29. USB_Host

5.29.1. HID_Host

DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the USBFS/USBHS as a HID host
- Learn the operation between the HID host and the mouse device
- Learn the operation between the HID host and the keyboard device

GD32F470I-EVAL board integrates the USBFS and USBHS module, and the module can be used as USB device, USB host or OTG device. This demo mainly shows how to use the USBFS/USBHS as a USB HID host to communicate with external USB HID device.

DEMO Running Result

Jump the JP5 to USB_FS and jump the JP17 to SDRAM. Insert the OTG cable to USB port. Then, download the program <29_USB_Host\HID_Host> to the EVAL board and run.

If a mouse has been attached, the user will see the information of mouse enumeration.

First pressing the user key will see the inserted device is mouse, and then moving the mouse will move the 'x' in the LCD screen and pressing the button will show the magenta color rectangle in the LCD screen.

If a keyboard has been attached, the user will see the information of keyboard enumeration.

First pressing the user key will see the inserted device is keyboard, and then pressing the keyboard will print the char of the button in the LCD screen.

5.29.2. MSC_Host

DEMO Purpose

This demo includes the following functions of GD32 MCU:

- Learn to use the USBFS/USBHS as a MSC host
- Learn the operation between the MSC host and the Udisk

GD32F470I-EVAL board integrates the USBFS and USBHS module, and the modules can be used as USB device, USB host or OTG device. This demo mainly shows how to use the USBFS or the USBHS as a USB MSC host to communicate with external Udisk.

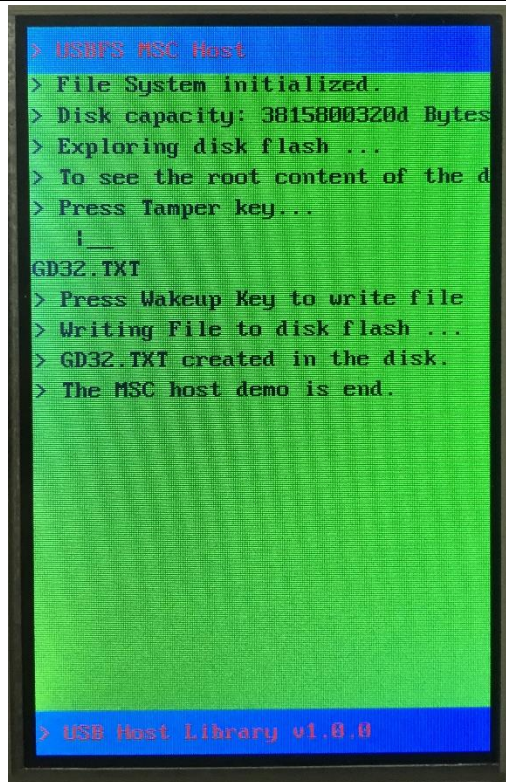

DEMO Running Result

Jump the JP5 to USB_FS and jump the JP17 to SDRAM. Insert the OTG cable to USB port. Then, download the program <29_USB_Host\HID_Host> to the EVAL board and run.

If an Udisk has been attached, the user will see the information of Udisk enumeration.

First pressing the user key will see the Udisk information, next pressing the tamper key will see the root content of the Udisk, then press the wakeup key will write file to the Udisk, finally the user will see information that the msc host demo is end.

6. Revision history

Revision No.	Description	Date
2.0	Initial Release	April.18, 2022

Important Notice

This document is the property of GigaDevice Semiconductor Inc. and its subsidiaries (the "Company"). This document, including any product of the Company described in this document (the "Product"), is owned by the Company under the intellectual property laws and treaties of the People's Republic of China and other jurisdictions worldwide. The Company reserves all rights under such laws and treaties and does not grant any license under its patents, copyrights, trademarks, or other intellectual property rights. The names and brands of third party referred thereto (if any) are the property of their respective owner and referred to for identification purposes only.

The Company makes no warranty of any kind, express or implied, with regard to this document or any Product, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose. The Company does not assume any liability arising out of the application or use of any Product described in this document. Any information provided in this document is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Except for customized products which has been expressly identified in the applicable agreement, the Products are designed, developed, and/or manufactured for ordinary business, industrial, personal, and/or household applications only. The Products are not designed, intended, or authorized for use as components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, atomic energy control instruments, combustion control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or Product could cause personal injury, death, property or environmental damage ("Unintended Uses"). Customers shall take any and all actions to ensure using and selling the Products in accordance with the applicable laws and regulations. The Company is not liable, in whole or in part, and customers shall and hereby do release the Company as well as its suppliers and/or distributors from any claim, damage, or other liability arising from or related to all Unintended Uses of the Products. Customers shall indemnify and hold the Company as well as its suppliers and/or distributors harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of the Products.

Information in this document is provided solely in connection with the Products. The Company reserves the right to make changes, corrections, modifications or improvements to this document and Products and services described herein at any time, without notice.
