1. General description

The GDSCN is a 2/3-port EtherCAT SubDevice controller with dual integrated Ethernet PHY which contain a full duplex 100BASE-TX transceiver and support 100Mbps (100BASE-TX) operation. The GDSCN supports HP Auto-MDIX, allowing the use of direct connect or cross-over LAN cables.

The GDSCN includes an EtherCAT SubDevice controller with 8K bytes of Process Data RAM(PDRAM) and 8 Fieldbus Memory Management Units (FMMUs). Each FMMU performs the task of mapping logical addresses to physical addresses. The EtherCAT SubDevice controller also includes 8 SyncManagers to allow the exchange of data between the EtherCAT main and the local application. Each SyncManager's direction and mode of operation is configured by the EtherCAT main. Two modes of operation are available: buffered mode or mailbox mode. In the buffered mode, both the local microcontroller and EtherCAT main can write to the device concurrently. The buffer within the GDSCN will always contain the latest data. If newer data arrives before the old data can be read out, the old data will be dropped. In mailbox mode, access to the buffer by the local microcontroller and the EtherCAT main is performed using handshakes, guaranteeing that no data will be dropped.

2. Device overview

2.1. Device information

Table 2-1. GDSCN devices features and peripheral list

Feature	GDSCN
Ports	3 ports(2PHYs,1MII)
FMMUs	8
SyncManagers	8
Process data RAM(PDRAM)	8KB
Distributed Clocks	64bit
Process Data Interfaces	Digital I/O On-chip bus(SPI,EXMC)
Power supply	1.1V Integrated voltage regulator for logic core/ 2.5V Ethernet magnetics/ 3.3V power supply voltage
I/O	1.8V~3.3V compatible I/O

2.2. Block diagram

Figure 2-1. GDSCN system diagram

Figure 2-2. GDSCN block diagram

2.3. Pinouts and pin assignment

Figure 2-3. GDSCN QFN64 pinouts

2.4. Memory map

Table 2-2. GDSCN memory map

Pre-defined Regions	Address	Peripherals

IO3	EXMC_AD4	PDI_DIGIO3	PDI_GPIO3	MII2_LINK	MII0_LINK
OUTVALID	EXMC_AD5	PDI_DIGIO_OUTVA LID	SCS	SCS	SCS

Notes:

- (1) QSPI(4-Wire) + MII(4-Wire) used in Three-terminal downlink mode.
- (2) QSPI(4-Wire) + MII used in Three-terminal uplink mode.

3. Functional description

3.1. EtherCAT® SubDevice Controller(ESC)

- Port support: 2 internal phy port and 1 external MII.
- 8 Fieldbus Memory Management Units (FMMUs).
- 8KB PDRAM.
- 64-bit distributed clock, support allows synchronization with other EtherCAT devices.
- 8 Syncmanager entities.
- DC synchronization deviation is less than 1us.

The EtherCAT® SubDevice Controller (ESC), licensed from Beckhoff Automation, It takes care of the EtherCAT communication as an interface between the EtherCAT fieldbus and the sub application.

3.2. Clock, reset and supply management

- Supports 25Mhz HSE clock.
- PLL: 25Mhz 8x frequency to achieve 200Mhz clock
- System clock: PLL 2 frequency division, fixed 100Mhz
- AHB/APB clock: Fixed 100Mhz
- Other normally open clock: 50Mhz, 25Mhz free running clock, for special functions
- 1.1 to 3.3V application supply and I/Os.

The Clock Control Unit (CCU) provides an external High Speed crystal oscillator (HXTAL) and a phase-locked loop (PLL). This clock is usually provided by the OSCIN and OSCOUT of the passive 25MHz crystal oscillator or by the OSCIN pin of the single-ended 25MHz clock source driver. See [Figure 2-4. GDSCN clock tree](#) for details on the clock tree.

The Reset Control Unit (RCU) controls two kinds of reset: system reset and module reset. System reset includes power-on reset (POR), external pin reset (NRST) and EtherCAT system reset, which can reset all circuits in the device. Module reset includes digital reset, PHY reset and EtherCAT core reset, which can reset each corresponding module.

Power supply schemes:

- V_{DDIO} range: 1.8 to 3.3 V, external power supply for I/Os. Provided externally through VDDIO pins.
- V_{DD33}, V_{DD3A1}, V_{DD3A2}: 3.3 V, external power supplies for Internal 1.1V Core Regulator and 1.1V Oscillator Regulator, PHYA and PHYB.
- V_{DDCR}, V_{DD1A1}, V_{DD1A2}: 1.1 V, power supply for I/Os, Core logic and PHY digital, PHYA and PHYB.

3.3. General-purpose inputs/outputs (GPIOs)

- Up to 35 GPIOs, 8 kinds of communication modes to can be choose
- Analog input/output configurable
- Alternate function input/output configurable

There are up to 35 general purpose I/O pins (GPIO) in GDEHC to implement logic input/output functions. Each of the GPIO ports has related control and configuration registers to satisfy the requirements of specific applications. The GPIO ports are pin-shared with other alternative functions (AFs) to obtain maximum flexibility on the package pins. Each of the GPIO pins can be configured by software as output (push-pull or open-drain), as input (with or without pull-up or pull-down) or as peripheral alternate function. Most of the GPIO pins are shared with digital or analog alternate functions. All GPIOs are high-current capable except for analog inputs.

3.4. Power saving modes

The GDSCN supports four types of device level and three types of module level power saving modes, device level power saving modes including MOD0, MOD1, MOD2 and MOD3, module level power saving modes including EtherCAT clock management, PHY power management and the LED pins power management. These modes reduce the power consumption and allow the application to achieve the best tradeoff among the conflicting demands of device operating time, speed and power consumption.

The device supports three types of module level power saving modes:

- The ECATCLKDIS bit in PMU_CTL0 register can use to disable EtherCAT core clock.
- PHY power management
 - PHY A and B ED power down management, support auto ED power down.
 - Common power down management.
- LEDs output management
 - The LEDOUTDIS bit in PMU_CTL0 register can use to disable LEDs output.
 - The LEDMODCFG bit in PMU_CTL0 register can use to configure LEDs working mode (take effect only when LEDOUTDIS is set).
 - The LEDINACT bit in PMU_CTL0 register can use to configure the inactive state when LEDs work in push-pull mode (take effect only when LEDOUTDIS is set).

3.5. Timers and Free-Running Counter (TIMER and FRC)

- 16-bit down counter
- Generate periodic system interrupts
- Resolution is 100us

The basic timer module has a 16-bit counter that can be used as an unsigned counter. The basic timer can be configured to generate interrupts. The resolution of basic timer is 100 μ s.

The Free-Running Counter has a 32-bit counter that can be used as an unsigned counter. The counter clock is 25MHz.

- 32-bit up counter
- Driven by free running 25Mhz clock

3.6. Process Data Interface (PDI) Wrapper

- Support SPI slave and EXMC mode.
- Supports three types SPI, QSPI, OSPI slave.
- EXMC supports both async and sync modes, 8-bit and 16-bit.

The Process Data Interface (PDI) Wrapper realizes the connection between ESC system bus and ESC core. through the AHB2OPB to connect. The SPI SLAVE and EXMC have only one work at the same time, which is selected by the pad of IO16(MCU_PDITYPE).

3.7. Ethernet PHYS

- Two internal phys connect to ESC core
- Supports MII interfaces, Auto negotiation and parallel detection capability for automatic speed and duplex selection

The GDSCN contains PHYs A and B, there are identical in functionality. The PHY A connects to the EtherCAT port 0 or 2. The PHY B connects to EtherCAT port 1. These PHYs interface with their respective MAC via an internal MII interface. The PHYs comply with the IEEE 802.3 Physical Layer for Twisted Pair Ethernet and can be configured for full duplex 100 Mbps (100BASE-TX) Ethernet operation. All PHYs registers follow the IEEE 802.3 specified MII management register set and are fully configurable.

3.8. Package and operation temperature

- QFN64 (GDSCN832R2U7).
- Operation temperature range: -40°C to +105°C (industrial level).

4. Electrical characteristics

4.1. Absolute maximum ratings

The maximum ratings are the limits to which the device can be subjected without permanently damaging the device. Note that the device is not guaranteed to operate properly at the maximum ratings. Exposure to the absolute maximum rating conditions for extended periods may affect device reliability.

Table 4-1. Absolute maximum ratings⁽¹⁾⁽³⁾

Symbol	Parameter	Min	Max	Unit
V _{DD1Ax}	Analog 1.1V power for Ethernet PHY	V _{SS} - 0.3	V _{SS} + 1.21	V
V _{OSCVDD11}	Internal 1.1V oscillator supply voltage	V _{SS} - 0.3	V _{SS} + 1.21	V
V _{DDCR}	Digital core supply voltage	V _{SS} - 0.3	V _{SS} + 1.21	V
V _{DD3Ax}	Analog 3.3V power for Ethernet PHY ⁽²⁾	V _{SS} - 0.3	V _{SS} + 3.6	V
V _{DD33}	Supply voltage for the internal regulators ⁽²⁾	V _{SS} - 0.3	V _{SS} + 3.6	V
V _{DDIO}	IO supply voltage ⁽²⁾	V _{SS} - 0.3	V _{SS} + 3.6	V
V _{OSCI}	oscillator supply voltage	V _{SS} - 0.3	V _{SS} + 3.6	V
V _{IN}	Input voltage on 5VT I/O ⁽⁴⁾	V _{SS} - 0.3	V _{DDIO} + 3.6	V
	Input voltage on other I/O	V _{SS} - 0.3	V _{DD} + 0.3	
T _A	Operating temperature range for grade 7 device	-40	105	°C
P _D	Power dissipation at T _A = 105°C of QFN64	—	844	mW
T _{STG}	Storage temperature range	-65	150	°C
T _J	Maximum junction temperature	—	125	°C

(1) Value guaranteed by design, not 100% tested in production.

(2) All main power and ground pins should be connected to an external power source within the allowable range.

(3) The device junction temperature must be kept below maximum T_J.

(4) V_{IN} maximum value cannot exceed 5.5 V.

4.2. Recommended DC characteristics

Table 4-2. DC operating conditions

Symbol	Parameter	Conditions	Min ⁽¹⁾	Typ	Max ⁽¹⁾	Unit
V _{DD1Ax}	Analog 1.1V power for Ethernet PHY	—	1.05	1.1	1.15	V
V _{OSCVDD11}	Internal 1.1V oscillator supply voltage	—	1.0	1.1	1.2	V
V _{DDCR}	Digital core supply voltage	—	1.05	1.1	1.15	V
V _{DD3Ax}	Analog 3.3V power for Ethernet PHY	—	3.0	3.3	3.6	V
V _{DD33}	Supply voltage for the internal regulator	—	3.0	3.3	3.6	V
V _{DDIO}	IO supply voltage	—	1.8	3.3	3.6	V

(1) Value guaranteed by characterization, not 100% tested in production.

Figure 4-1. Recommended power connections(regulators enabled)⁽¹⁾

(1) All decoupling capacitors need to be as close as possible to the pins on the PCB board.

Figure 4-2. Recommended power connections(regulators disabled)⁽¹⁾

(1) All decoupling capacitors need to be as close as possible to the pins on the PCB board.

Table 4-3. Power supply on and off timing values⁽¹⁾

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
t _{PON}	Power supply turn on time	—	—	—	50	ms
t _{POFF}	Power supply turn off time	—	—	—	500	ms

(1) Value guaranteed by design, not 100% tested in production.

Figure 4-3. Power supply on and off timing (internal regulators)

Figure 4-4. Power supply on and off timing (external regulators)

Table 4-4. Power-on configuration strap latching timing values⁽¹⁾⁽²⁾

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
t _{CFG}	Configuration strap valid time	—	—	—	15	ms

(1) Value guaranteed by design, not 100% tested in production.

(2) Configuration straps must only be pulled high or low. Configuration straps must not be driven as inputs.

Figure 4-5. Power-on configuration strap latching timing diagram

4.3. EMC characteristics

Component level ESD include HBM (Human body model, according to ANSI/ESDA/JEDEC JS-001) and CDM (ANSI/ESDA/JEDEC JS-002), that ESD field events during manufacturing in an ESD protected area, such as PCB assembly/repair, IC assembly/test and Fab environment. The ESD protected area (EPA) has many measures, for instance ESD protective packaging, grounding person wrist strap to ground (or flooring/footwear), grounded work surface and ionizer.

Static latch-up (LU, according to JEDEC78) test is based on the two measurement methods, I/O current injection value (I-test) and power supply over-voltage value.

Table 4-5. Component level ESD and latch-up characteristics⁽¹⁾

Symbol	Description	Conditions	Package	Max	Unit	Level
V _{HBM}	Human body model electrostatic discharge voltage (Any pin combination)	T _J = 25 °C; JS-001	QFN64	2000	V	Class 2
V _{CDM}	Charge device model electrostatic discharge voltage (All pins)	T _J = 25 °C; JS-002	QFN64	500	V	Class C2a
LU	I-test	T _A = 125 °C, JESD78	QFN64	200	mA	Class II Level A
	V _{supply} over voltage			5.4	V	

(1) Value guaranteed by characterization, not 100% tested in production.

4.4. Power consumption

Table 4-6. Power consumption characteristics⁽¹⁾

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
Regulators enabled						
3.3V Device Current ⁽²⁾	Supply current (MOD0)	Disconnect to the Ethernet cable	—	36	—	mA
		100BASE-TX with traffic	—	86	—	
		100BASE-TX with idle	—	85	—	
	Supply current (MOD1)	100BASE-TX with idle	—	82	—	
	Supply current (MOD2)	100BASE-TX with idle	—	80	—	
	Supply current (MOD3)	All clocks off	—	17	—	
Regulators disabled						
3.3V Device Current ⁽²⁾	Supply current (MOD0)	Disconnect to the Ethernet cable	—	24	—	mA
		100BASE-TX with traffic	—	42	—	
		100BASE-TX with idle	—	42	—	
	Supply current (MOD1)	100BASE-TX with idle	—	40	—

Figure 4-10. EtherCAT digital I/O bi-directional timing diagram

4.9. I2C characteristics

Table 4-14. I2C controller timing values⁽¹⁾

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
f_{SCL}	EESCL clock frequency	—	—	148.8	—	KHz
$t_{SCL(H)}$	EESCL clock high time	—	3.0	—	—	us
$t_{SCL(L)}$	EESCL clock low time	—	3.0	—	—	us
$t_{r(SDA/SCL)}$	EESDA and EESCL rise time	—	—	—	300	ns
$t_{f(SDA/SCL)}$	EESDA and EESCL fall time	—	—	—	300	ns
$t_{SU(STA)}^{(2)}$	Setup time (provided to target) of EESCL high before EESDA output falling for repeated start condition	—	1000	—	—	ns
$t_{HD(STA)}^{(2)}$	Hold time (provided to target) of EESCL after EESDA output falling for start or repeated start condition	—	1000	—	—	ns
$t_{SU(DAT_IN)}^{(3)}$	Setup time (from target) EESDA input before EESCL rising	—	200	—	—	ns
$t_{HD(DAT_IN)}$	Hold time (from target) of EESDA input after EESCL falling	—	0	—	—	ns
$t_{SU(DAT_OUT)}^{(3)}$	Setup time (provided to target) EESDA output before EESCL rising	—	400	—	—	ns
$t_{HD(DAT_OUT)}^{(3)}$	Hold time (provided to target) of EESDA output after EESCL falling	—	400	—	—	ns
$t_{SU(STO)}^{(2)}$	Setup time (provided to target) of EESCL high before EESDA output rising for stop condition	—	1000	—	—	ns

(1) Guaranteed by design, not 100% tested in production.

(2) These values provide 400ns of margin compared to the I2C fast-mode specification.

(3) These values provide a margin of approximately 2100ns compared to the I2C fast-mode specification.

Figure 4-11. I2C bus timing diagram

4.10. SPI /QSPI/OSPI slave characteristics

Table 4-15. SPI/QSPI/OSPI slave timing values ⁽¹⁾

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
$f_{SCK}^{(2)}$	SCK clock frequency	—	—	—	75	MHz
t_{HIGH}	SCK high time	—	—	5	—	ns
t_{LOW}	SCK low time	—	—	5	—	ns
t_{SCSS}	SCS setup time to SCK	—	5	—	—	ns
t_{SCSH}	SCS hold time from SCK	—	5	—	—	ns
t_{SCSHL}	SCS inactive time	—	—	50	—	ns
t_{SU}	Data input setup time to SCK	—	2	—	—	ns
t_{HD}	Data input hold time from SCK	—	3	—	—	ns
t_{ON}	Data output turn on time from SCK	—	0	—	—	ns
t_v	Data output valid time from SCK	—	—	—	8	ns
t_{HO}	Data output hold time from SCK	—	0	—	—	ns
t_{DIS}	Data output disable time from SCS inactive	—	—	—	20	ns

(1) Value guaranteed by design, not 100% tested in production.

(2) Ideally, the f_{SCK} is capable of reaching up to 100MHz when the PCB design complies with signal integrity specifications (incorporating trace length control, matched-length routing, impedance control, etc.), although this value is not warranted as a design guarantee.

Figure 4-12. SPI/QSPI/OSPI input timing diagram

4.11. EXMC characteristics

Table 4-16. Synchronous multiplexed read timings⁽¹⁾

Symbol	Parameter	Min	Typ	Max	Unit
f_{CLK}	EXMC clock frequency	—	—	80	MHz
$t_{su}(NEL_CLKH)$	EXMC_NE low setup time to EXMC_CLK high	3.25	—	—	ns
$t_{su}(NLL_CLKH)$	EXMC_NL low setup time to EXMC_CLK high	4	—	—	ns
$t_{su}(NOEL_CLKH)$	EXMC_NOE low setup time to EXMC_CLK high	3.75	—	—	ns
$t_{su}(ADV_CLKH)$	EXMC_ADV setup time to EXMC_CLK high	3	—	—	ns
$t_d(CLKH_DV)$	EXMC_CLK high valid time to EXMC_DV	—	—	9.5	ns
$t_d(CLKH_DIV)$	EXMC_CLK high valid time to EXMC_DIV	0	—	—	ns
$t_d(CLKH_NWAITL)$	EXMC_CLK high valid time to EXMC_NWAIT low	—	—	9	ns
$t_d(CLKH_NWAITH)$	EXMC_CLK high valid time to EXMC_NWAIT high	2.5	—	—	ns

(1) Value guaranteed by design, not 100% tested in production.

Table 4-17. Synchronous multiplexed write timings⁽¹⁾

Symbol	Parameter	Min	Typ	Max	Unit
f_{CLK}	EXMC clock frequency	—	—	80	MHz
$t_{su}(NLL_CLKH)$	EXMC_NL low setup time to EXMC_CLK high	3.25	—	—	ns
$t_{su}(NWE_CLKH)$	EXMC_NWE low setup time to EXMC_CLK high	4	—	—	ns
$t_{su}(ADV_CLKH)$	EXMC_ADV setup time to EXMC_CLK high	3.75	—	—	ns
$t_{su}(DV_CLKH)$	EXMC_DV setup time to EXMC_CLK high	3	—	—	ns
$t_d(DV_CLKH)$	EXMC_DV high valid time to EXMC_CLK	3.25	—	—	ns
$t_d(CLKH_NWAITL)$	EXMC_CLK high valid time to EXMC_NWAIT low	—	—	9	ns
$t_d(CLKH_NWAITH)$	EXMC_CLK high valid time to EXMC_NWAIT high	2.5	—	—	ns

(1) Value guaranteed by design, not 100% tested in production.

4.12. Ethernet PHY characteristics

Table 4-18. MII TX timing values⁽¹⁾

Symbol	Parameter	Min	Typ	Max	Unit
t_{CLKP}	MII_CLK25 period	40	—	—	ns
t_{CLKH}	MII_CLK25 high time	18	—	22	ns
t_{CLKL}	MII_CLK25 low time	18	—	22	ns
t_{VAL}	MII_TXD[3:0], MII_TXEN output valid from rising edge of MII_CLK25	—	—	10	ns
t_{HOLD}	MII_TXD[3:0], MII_TXEN output hold from rising edge of MII_CLK25	0	—	—	ns

(1) Value guaranteed by design, not 100% tested in production.

Figure 4-14. MII TX timing diagram

Table 4-19. MII RX timing values⁽¹⁾

Symbol	Parameter	Min	Typ	Max	Unit
tCLKP	MII_RXCLK period	40	—	—	ns
tCLKH	MII_RXCLK high time	16	—	24	ns
tCLKL	MII_RXCLK low time	16	—	24	ns
t _{SU}	MII_RXD[3:0], MII_RXER, MII_RXDV setup time to rising edge of MII_RXCLK	5	—	—	ns
t _{HOLD}	MII_RXD[3:0], MII_RXER, MII_RXDV hold time after rising edge of MII_RXCLK	6	—	—	ns

(1) Value guaranteed by design, not 100% tested in production.

Figure 4-15. MII RX timing diagram

Table 4-20. Management access timing values⁽¹⁾

Symbol	Parameter	Min	Typ	Max	Unit
t_{CLKP}	MII_MDC period	400	—	—	ns
t_{CLKH}	MII_MDC high time	180	—	—	ns
t_{CLKL}	MII_MDC low time	180	—	—	ns
t_{VAL}	MII_MDIO output valid from rising edge of MII_MDC	—	—	250	ns
t_{OHOLD}	MII_MDIO output hold from rising edge of MII_MDC	150	—	—	ns
t_{SU}	MII_MDIO input setup time to rising edge of MII_MDC	70	—	—	ns
t_{IHOLD}	MII_MDIO input hold time after rising edge of MII_MDC	0	—	—	ns

(1) Value guaranteed by design, not 100% tested in production.

5.2. Thermal characteristics

Thermal resistance is used to characterize the thermal performance of the package device, which is represented by the Greek letter “ θ ”. For semiconductor devices, thermal resistance represents the steady-state temperature rise of the chip junction due to the heat dissipated on the chip surface.

θ_{JA} : Thermal resistance, junction-to-ambient.

θ_{JB} : Thermal resistance, junction-to-board.

θ_{JC} : Thermal resistance, junction-to-case.

Ψ_{JB} : Thermal characterization parameter, junction-to-board.

Ψ_{JT} : Thermal characterization parameter, junction-to-top center.

$$\theta_{JA} = (T_J - T_A) / P_D \quad (5-1)$$

$$\theta_{JB} = (T_J - T_B) / P_D \quad (5-2)$$

$$\theta_{JC} = (T_J - T_C) / P_D \quad (5-3)$$

Where, T_J = Junction temperature.

T_A = Ambient temperature

T_B = Board temperature

T_C = Case temperature which is monitoring on package surface

P_D = Total power dissipation

θ_{JA} represents the resistance of the heat flows from the heating junction to ambient air. It is an indicator of package heat dissipation capability. Lower θ_{JA} can be considerate as better overall thermal performance. θ_{JA} is generally used to estimate junction temperature.

θ_{JB} is used to measure the heat flow resistance between the chip surface and the PCB board.

θ_{JC} represents the thermal resistance between the chip surface and the package top case. θ_{JC} is mainly used to estimate the heat dissipation of the system (using heat sink or other heat dissipation methods outside the device package).

Table 5-2. Package thermal characteristics⁽¹⁾

Symbol	Condition	Package	Value	Unit
θ_{JA}	Natural convection, 2S2P PCB	QFN64	23.7	°C/W
θ_{JB}	Cold plate, 2S2P PCB	QFN64	10	°C/W
θ_{JC}	Cold plate, 2S2P PCB	QFN64	18	°C/W
Ψ_{JB}	Natural convection, 2S2P PCB	QFN64	10	°C/W
Ψ_{JT}	Natural convection, 2S2P PCB	QFN64	0.8	°C/W

(1): Thermal characteristics are based on simulation, and meet JEDEC specification.

6. Ordering information

Table 6-1. Part ordering code for GDSCN832xx devices

Ordering code	Package	Package type	Temperature operating range
GDSCN832R2U7	QFN64	Green	Industrial -40 °C to +105 °C

7. Revision history

Table 7-1. Revision history

Revision No.	Description	Date
1.0	Initial Release	Nov.8, 2024
1.1	1. In Figure 2-1, change "master" to "main" and "slave" to "subdevice." 2. Delete EXMC timing diagrams 4-14,4-15. 3. Add descriptions for Model GDSCN832R2U7 4. Change the VCORE of the full text to VDDCR	May.15.2025
1.2	1. The clock frequency has been changed to 75 MHz. Please add a corresponding NOTE for clarification. 2. Remove the PD parameters at 85°C and delete the x6 selection option. 3. Rename the pin multiplexing functions as follows: MII_CLK → ESC_MDC MII_DATA → ESC_MDIO MII_CLK25 → ESC_CLKOUT_25M 4. Add a NOTE to indicate the usage scenarios for QSPI (4-Wire) + MII (4-Wire) and QSPI (4-Wire) + MII. 5. Revise the feature description to: DC synchronization deviation is less than 1us. 6. Chang the EtherCAT to EtherCAT® 7. Update the EMC parameters. 8. Delete the 100BASE-FX description.	Sep.15.2026

Important Notice

This document is the property of GigaDevice Semiconductor Inc. and its subsidiaries (the "Company"). This document, including any product of the Company described in this document (the "Product"), is owned by the Company according to the laws of the People's Republic of China and other applicable laws. The Company reserves all rights under such laws and no Intellectual Property Rights are transferred (either wholly or partially) or licensed by the Company (either expressly or impliedly) herein. The names and brands of third party referred thereto (if any) are the property of their respective owner and referred to for identification purposes only.

To the maximum extent permitted by applicable law, the Company makes no representations or warranties of any kind, express or implied, with regard to the merchantability and the fitness for a particular purpose of the Product, nor does the Company assume any liability arising out of the application or use of any Product. Any information provided in this document is provided only for reference purposes. It is the sole responsibility of the user of this document to determine whether the Product is suitable and fit for its applications and products planned, and properly design, program, and test the functionality and safety of its applications and products planned using the Product. The Product is designed, developed, and/or manufactured for ordinary business, industrial, personal, and/or household applications only, and the Product is not designed or intended for use in (i) safety critical applications such as weapons systems, nuclear facilities, atomic energy controller, combustion controller, aeronautic or aerospace applications, traffic signal instruments, pollution control or hazardous substance management; (ii) life-support systems, other medical equipment or systems (including life support equipment and surgical implants); (iii) automotive applications or environments, including but not limited to applications for active and passive safety of automobiles (regardless of front market or aftermarket), for example, EPS, braking, ADAS (camera/fusion), EMS, TCU, BMS, BSG, TPMS, Airbag, Suspension, DMS, ICMS, Domain, ESC, DCDC, e-clutch, advanced-lighting, etc.. Automobile herein means a vehicle propelled by a self-contained motor, engine or the like, such as, without limitation, cars, trucks, motorcycles, electric cars, and other transportation devices; and/or (iv) other uses where the failure of the device or the Product can reasonably be expected to result in personal injury, death, or severe property or environmental damage (collectively "Unintended Uses"). Customers shall take any and all actions to ensure the Product meets the applicable laws and regulations. The Company is not liable for, in whole or in part, and customers shall hereby release the Company as well as its suppliers and/or distributors from, any claim, damage, or other liability arising from or related to all Unintended Uses of the Product. Customers shall indemnify and hold the Company, and its officers, employees, subsidiaries, affiliates as well as its suppliers and/or distributors harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of the Product.

Information in this document is provided solely in connection with the Product. The Company reserves the right to make changes, corrections, modifications or improvements to this document and the Product described herein at any time without notice. The Company shall have no responsibility whatsoever for conflicts or incompatibilities arising from future changes to them. Information in this document supersedes and replaces information previously supplied in any prior versions of this document.
